

Plugging in Shure SM58 XLR Cable

This guide will show you how to install (or plug in) the XLR cable to the microphone.

Written By: nat coll

INTRODUCTION

The function of a XLR cable is to carry a balanced audio signal. It connects in the bottom of the microphone to the XLR microphone connector.

Step 1 — XLR Cable Plug In

- Make sure you have a proper three pin XLR cable.
- Grab the female end of the cable (plug with three holes).

Step 2

- Line up the pins in the end of the microphone (microphone connector) with the holes in the XLR cable.

Step 3

- Once the pins are aligned, push the cable into the bottom end of the microphone. You should hear a click.

To disconnect the cable from the microphone, follow the instructions in reverse.
